

CSI Daily Monitor

Performance Monitoring & Forecasting System

Author: Yang Hsin En (William)
Role: Lead Data Analyst / Systems Architect
Date: March 2026

Environment :  Studio   ChatGPT

The Challenge

**“Customer satisfaction is monitored too late.
Issues are only detected after they happen,
not before they impact operations.”**

Objective

Shift from reactive reporting to proactive risk detection.

KPI Dashboard

Driving Daily Operational Decisions

Branch Code name		April CSI Daily Report				2026/04/06
		CSI indication				Sample opportunity
		A+ 落實度	滿意度	低滿意比例	國通率	可加強勸誘
A52 新莊	樣本數 251	98.8% ▲ +0.1% (248件)	98.4% ▲ +0.1% (247件)	0.8% ▼ -0.0% (2件)	57.6% (76件)	26件 (19.7%)
A53 濱江	樣本數 428	98.4% ▲ +0.1% (421件)	96.5% ▼ -0.1% (413件)	1.4% ▼ -0.1% (6件)	48.4% (134件)	40件 (14.4%)
A54 中和	樣本數 188	96.8% ▼ -0.4% (182件)	93.6% ▲ +0.4% (176件)	2.1% ▼ -0.1% (4件)	47.2% (50件)	19件 (17.9%)
A55 士林	樣本數 177	95.5% ▲ +0.5% (169件)	97.7% ▲ +0.3% (173件)	1.1% ▼ -0.1% (2件)	42.5% (45件)	24件 (22.6%)
A56 三重	樣本數 61	98.4% ▼ -1.6% (60件)	100.0% — +0.0% (61件)	0.0% — +0.0% (0件)	59.1% (13件)	2件 (9.1%)
Total 合計	樣本數 1105	97.7% ▼ -0.1% (1080件)	96.8% ▲ +0.1% (1070件)	1.3% ▼ -0.1% (14件)	49.5% (318件)	111件 (17.3%)

Provides real-time visibility across all branches
Highlights underperforming KPIs using color signals
Identifies actionable opportunities
Enables supervisors to take immediate action

Forecasting

Identifying Risks Before Happen

Using time-series models (ARIMA & Prophet) to forecast CSI trends and identify potential performance risks in advance.

Key capabilities :

- Identifies the lowest prediction as the highest risk day.
- Provides early warning before KPI thresholds are breached.
- Supports proactive intervention instead of reactive reporting.

Predicted Branch A54 CSI drops to 95.8% on Apr 8, indicating a high risk of falling below the 97% target.

Action

What Drives Dissatisfaction & Where to Act

Using Point-Biserial Correlation method for precision key factors finding.

Key Findings :

- Multiple service factors strongly correlate with dissatisfaction
- Process-related issues have the highest negative impact
- These factors is the most critical of poor customer experience

Insight :

The most critical driver of dissatisfaction is "09-Service completion within expected time", showing the strongest negative correlation. Addressing this factor is expected to significantly reduce dissatisfaction.

Recommended Actions :

- Improve communication of waiting time during service
- Standardize service process to reduce variability across branches
- Prioritize training on high-impact service touchpoints

Business Impact — From Insights to Measurable Outcomes

Projected Impact

- CSI improvement: +2% to +3%
- Reduction in low satisfaction cases: 15%–20%
- Earlier intervention window: 3–7 days
- Increased response efficiency across branches
- More focused allocation on high-impact factors

Business Value

- Enables proactive decision-making
- Reduces operational risks before KPI degradation
- Improves customer experience consistency across branches
- Transforms data into actionable operational strategy
